20a. How does the Committee accomplish its purpose?

Congress created the National Educational Research Policy and Priorities Board to work collaboratively with the Assistant Secretary for the Office of Educational Research and Improvement (OERI) to forge a national consensus with respect to a long-term agenda for educational research, development, dissemination, and the activities of the Office. The Board reviewed and approved the Research Priorities Plan developed by the Assistant Secretary in collaboration with the Board, and reviewed and approved standards for the conduct and evaluation of all research, development, and dissemination carried out under the auspices of OERI pursuant to the Educational Research, Development,

Dissemination, and Improvement Act of 1994. The Board served in a liaison capacity with the education research field and the public, and had responsibilities to strengthen the educational research and development system. It enjoyed substantial independence in gathering information, commissioning studies, and communicating with the American people and the United States Congress about educational research. The operations of the Board were required to be collaborative, carried out in concert with the Assistant Secretary for OERI as well as with the providers and consumers of research. The Board has been grateful for the cooperation of its ex officio members from numerous federal agencies in which research is a prominent component. In FY 2001, the Board, wishing to strengthen and make more explicit how the scientific method is used in educational research, invested a substantial part of its resources in contracting with the National Academy of Sciences/National Research Council for a study on scientific principles in educational research and how they might be strengthened in a federally-funded agency. The study report, *Scientific Research in Education*, was issued in November 2001 and published in 2002. As the publication was widely anticipated, it was immediately requested by Congressional staff working on the legislation which became the Education Sciences Reform Act of 2002. Two sessions were devoted to the report at the annual meeting of the American Educational Research Association in April 2002. Agency and Board personnel participated as speakers and panelists in these presentations. National, state, and local policymakers have found the report a valuable resource for sorting out the requirements for evidence-based curricula. In addition, the Education Sciences Reform Act of 2002 reflects

many of the recommendations, especially in the area of peer review and standards, as well as staffing, made by the Board in previous publications and white papers.

20b. How does the Committee balance its membership?

As specified in the Board's authorizing legislation, the Board consisted of 15 (appointed and voting) members from diverse backgrounds, representing educational researchers, the practitioner community, and others with informed perspectives on education from the public and private sectors. The Secretary of Education solicited nominations from numerous associations, education-related organizations, and interested members of the public. This formulation, required by law, assured that a wide spectrum of stakeholders and interest groups have representation and allows for collaboration between the theoretical and practical points of view. The Board's committees, which conducted its specialized activities, such as program preparation, peer review and standards, and research and development, also reflect the tripartite structure of the whole. The Board's legislation likewise specifies a number of non-voting ex officio members from other federal agencies with a substantial research component.

20c. How frequent and relevant are the Committee Meetings?

The Board was set up to meet at least four times a year, usually in January, March, June, and September, and its subcommittees meet on an as-needed basis in the interim to provide advice and recommendations pertaining to emerging initiatives in OERI and to advance its own work plan.

20d. Why can't the advice or information this committee provides be obtained elsewhere?

When the Board was created, the Congress sought to establish a forum of 15 individuals distinguished for their accomplishments in the field of education. This body was to provide non-partisan leadership and direction over a sustained period to the Federal effort in educational research. It would also forge a consensus on focusing resources where needs are greatest and where research will yield practical benefits in a timely manner. Input from the Board was a valuable resource to the agency and congressional staff as they planned for the reauthorization of OERI. It is to be noted that the new legislation has a board with a structure and duties that have notable parallels with NERPPB.

20e. Why is it necessary to close and/or partially closed committee meetings?

21. Remarks

The Board terminated by the passage of the Education Sciences Reform Act of 2002, P.L. 107-279 on 11/5/2002.

Designated Federal Officer

Mary G. Lucier DFO

Committee Members	Start	End	Occupation	Member Designation
Acosta, Adela	06/18/2001	11/05/2002	Principal, Cesar Chavez Elementary School, Hyattsville, MD	Special Government Employee (SGE) Member
